

Moving CurrentWare to the Cloud

Four reasons our team recommends the CurrentWare cloud solution:

01

One Less Server to Maintain

You have a business to run, and we want to help by reducing your workload. With CurrentWare Cloud, we manage your server, which means one less item on your team's to-do list.

02

Priority Access to New Features

New capabilities will ship to cloud first, and updates get pushed automatically. This means you get access to the latest version of our software, and all the new features, before anyone else.

03

Secure Visibility from Anywhere

Get access from anywhere, with reduced risk. No exposure through open ports, and coverage doesn't depend on local servers or VPN connectivity, making it perfect for hybrid or remote teams.

04

Instant Scalability and Customization

Extend licenses in seconds, add screenshot capabilities, or SIEM integrations with just one click. Our goal is to make it easy for clients to configure their setup to match their unique business needs.

Average Hidden Costs of Server Maintenance

With on-prem deployments, the cost of your licenses is the only visible line, when it usually represents only about 52% of the actual costs to maintain physical servers. If you add the hidden costs, the perceived savings can diminish quickly.
